
Spacelabs Mcare 300 Patient Monitor Service Manual Full ((BETTER)).17

We compared heart rate measurements with manual dPP measurements. BP and airway pressure (PAW) were recorded in 24 patients. We noticed that the mean time between pulse measurement and pressure did not change compared to the pulse measurement, although we noticed a difference between DPP and PAW that was twice as high with DPP compared with PAW. We determined that the mean brachial BP measurement with a chest monitor was lower than the manual brachial BP measurement. Measurement of dPP was similar to measurement of brachial blood pressure.
