chapter 1 introduces the c language; it describes the major facilities of the c programming language. this chapter also covers the topics of the c preprocessor, conditional constructs, and block scoping.chapter 2 introduces the fundamental data structure: array. it discusses the characteristics and operations on arrays. chapter 3 introduces the basic data structures: linked list and stacks. it covers the topics of the data structure with a critical look on the implementation of the algorithms that they support. chapter 4 covers the topics of the data structure: queue. it discusses the operations on queue along with the data structure and algorithms for queue. chapter 5 introduces the basic data structure: search trees. it discusses the operations on the data structure and the algorithms for the same. it gives a theoretical overview of the algorithms and their implementations in c. chapter 6 deals with the data structure: graphs and digraphs. the topic deals with the different graph concepts and the operations supported over them. the chapter also covers the algorithms which support different operations and its implementation in c. this chapter is also a basic introduction to the subroutines commonly used in the graph algorithms. chapter 7 discusses the basic data structure: hash table. this section gives an overview of this data structure along with its implementation using the c programming language. the chapter discusses the characteristics and operations of the data structure. the topics covered in this chapter include: hashing, linked lists, implementation of hash function, traversing the list, performance aspects of the hash function, searching, insertions, and deletions.
