PTC Arbortext IsoDraw 7.3 M080 PTC Creo Illustrate 4.1 F000 PTC Creo View 4.1 .Evidence for a diet-gene interaction in the outcome of childhood obesity. The high prevalence of overweight and obesity in children suggests a genetic component to the observed rise in body weight. However, despite the identification of a number of genes influencing appetite and food intake, only a few susceptibility genes have been identified which regulate body weight. One possible explanation for this is that diet and genes interact in the development of obesity. In this study we present the results of an investigation to identify markers of
