For fans of photo editing, Photoshop stands alone as the king. It continues to be one of the industry's most popular applications. But Photoshop is currently limited to the Macintosh platform. With the latest release of Photoshop CS6, that changed. Now Adobe Photoshop CS6 Extended is available on the iPad.
Take a minute to get a feel of this incredible app and use it on your iPad. Avatar Artist Robb Price gave us an Insider's View of his experience reviewing the product and demos the Photoshop editing features.
Robb used the 12-inch iPad Pro in landscape mode, which he likes because he can work faster and more efficiently with the extra screen real estate. I've used Photoshop for more than 15 years. And I've always been a Macintosh user. With the release of Photoshop CS6 I upgraded to the Mac platform, testing the product extensively on an Intel-based Mac. Though the Apple technology was very powerful, even with the large 12-inch screen, testing was slow as I was working on the large screen. There was no place to put everything I needed while working. Comping is much quicker on the iPad Pro, as is changing perspective, and so on. But, the biggest plus is the fact that I can work on and off the iPad.
I've been using the 12-inch version of the iPad Pro with the newer version of Photoshop for about 2 weeks and it's been wonderful. I can take my

laptop away on business trips and with the iPad Pro in my backpack, I can continue to work productively during that time. I'm not ready to give up the Pro, yet. But I am getting closer to that end of the spectrum. "
