KEYMACRO is designed as a sort of security utility for your Microsoft Windows operating system. It is intended to be able to help to protect your keylogging from potential attacks by attackers and spies. It should be noted that the keylogger, while being a big security threat, is also very useful. This utility can be very useful for spies, who may be trying to get access to your password database. Features: Install and launch the software You can install the program from the installation file, which should be downloaded at the following link: Download it and run the.exe file to launch the utility. Startkeylogger The program starts by displaying the Startkeylogger window, which is accessible by clicking the Start

button. From this point on, you can use the program for a couple of purposes. Find and list saved passwords The Startkeylogger window allows you to choose which types of passwords you are interested in, for example, the ones saved in your browser, in your emails or other places. You can then select the password database you want to search and then click the Find button. This will display the results of the search in the Password Database window, which you can then inspect and copy the information to the clipboard. Add and delete keys Keymacro allows you to add and remove keys to your Windows keyboard. By default, the program automatically detects the keyboard layout. You can change the layout by selecting the language and country in the drop-down menu and clicking the Change button. The keys that you have added to the keyboard layout are displayed in the Keyboard layout window, which you can also edit and add new keys by clicking the Edit button. You can use the program to perform other things as well, such as changing the file association with a certain file format or language. Runs smoothly The program operates smoothly and uses minimal system resources.
