Using Sensei in Adobe Bridge or Photoshop Elements is very easy to use. You can edit your large image and enjoy a seamless experience. Plus, you can use most of Photoshop's tools and filters in both applications and enjoy all the feature synonymous with Photoshop. Easily share your images and collaboration tools with your team on the "Share for review" workspace from within Photoshop. Once you share your image, receive a link you can share with others or keep it for yourself. A team can pitch in and review your shared image. Once the team is done, the file is automatically shared back to you. A convenient new canvas layout and Direct Selection tool allow you to edit an image in a familiar and intuitive way. The new interface allows you to swap between different canvases with a simple flick. You can use Direct Selection tool to interact with moving objects within a single canvas or a subtraction or difference of one canvas that lets you interact with the editing history within a single canvas. These features are accessible through the Actions panel, which includes a "Bring to Front" and "Send to Back" button, as well as contextual menu actions. The Actions panel also includes the "Batch Actions" panel - a substantially updated version of the batch editor that allows you to run a variety of actions on multiple files in a single panel. Adobe Photoshop CC now includes a smarter way to retouch your images, including removing unwanted objects such as hair or altering colors. The magical new "Just Remove" feature uses Adobe's AI to complete smart retouching, as well as removing objects obsessively. There are also integrated retouching effects you can pull from the Market, too.

The new update to the shell of Photoshop has brought with it some great fixes to the user experience, with work on the new library layout, the addition of new items in the contextual menus and the ability to handle more large files. One of the most exciting new features in the latest update is the improvements to the abilities to work with files in the cloud. As well as there being the ability to search for images, and receive instant feedback from other users, the camera can now also download images from the cloud as

well as provide image editing capabilities by performing the necessary adjustments directly on the cloud-based images. This is where the strength of Dropbox-based file sharing really shines. I say bad kudos to Dropbox for standing up to the \$500 annual cost of Creative Cloud, and delivering you an improved experience for free. While we are on the subject of new features, the new “make” panel can be found in two places – in the top bar as a free floating drop down, or the new timeline clip. The new timeline clip allows you to freely manipulate video with ease. This allows for some really fast editing, and the clipboard has been enhanced to allow media to be inserted with the drop-down menu. In terms of exporting, things are looking an absolute mess at the moment (see above) – but this should be resolved by the time the update is released. In the latest update to Photoshop, the new in-app update interface allows you to update directly to a new version with all your existing work loaded on the same device, without the need to re-export or re-open your work from the cloud. This is one of the most important new features to come out of the update.
