Step 1: Launch the Game and Cheat Engine

First, launch the game and start a new session. Then, launch the cheat engine and select the game process from the list. You can use the magnifying glass icon to search for the game process by name.

Step 2: Scan for Money Value

Next, you need to scan for the money value in the game. The money value is displayed on the top left corner of the screen. You can use the hotkey Ctrl+Shift+C to copy the money value to your clipboard.

Then, go back to the cheat engine and paste the money value in the value box. Make sure you select "Exact Value" and "4 Bytes" as the scan type and value type respectively. Then, click on "First Scan".

You should see a list of addresses on the left panel that match the money value. If you see too many addresses, you need to change the money value in the game and scan again until you find one or a few addresses that change accordingly.

Once you have found the address or addresses that correspond to the money value in the game, you can change them to any amount you want. To do this, select the address or addresses on the left panel and click on "Add selected addresses to the address list".

Then, double-click on the value column on the bottom panel and enter your desired amount of money. For example, you can enter 9999999 to get unlimited money. You should see the money value in the game change instantly.
