# How to Use VectorScribe 2.3 Plugin for Adobe Illustrator

VectorScribe is a plugin that seamlessly integrates into Adobe Illustrator and helps you edit vectors, create shapes, corners and measurements. It is one of the most popular plugins from Astute Graphics, a company that offers a suite of plugins to speed up your design workflow.

In this article, we will look at some of the new features of VectorScribe version 2.3, which was released in 2015. These features include:

- Dynamic Shapes Tool: This tool allows you to create a wide range of shapes from squares, gears to hearts. You can enter specific values into the Dynamic Shapes panel or simply click-and-drag the shape annotations to edit segments and sides, true shape origin, height, width and diameter, corner radius and slice angles. You can also convert basic geometric shapes to/from dynamic with one press of a button.
- Dynamic Corners Tool: This tool lets you add rounded corners to any path or shape with ease. You can adjust the corner radius by dragging the annotation or using the keyboard shortcuts. You can also apply different corner types such as chamfer, inverted round or cutout.
- Smart Point Removal Brush: This tool helps you reduce file size and make artwork easier to edit by removing excess points with a pressure sensitive brush action. It intelligently removes points while working hard to maintain the path shape.
- Extend Path Tool: This tool enables you to extend or trim paths to exact lengths or intersections. It is especially useful for typographers, fashion designers and technical illustrators who need precise control over their paths.
- Reposition Point Tool: This tool allows you to slide a point along a path while working to maintain the path shape. It also shows you the optimal clockwork point placement with annotations.

These are just some of the features of VectorScribe 2.3 that can help you create vector graphics faster and easier in Adobe Illustrator. To learn more about VectorScribe and other Astute Graphics plugins, visit their website[^1^] or watch their YouTube tutorials[^2^]. You can also download a free trial version of VectorScribe and try it out for yourself.
